Dear Sirs:

Henry Ford Health System has successfully collaborated with Epiphan Systems under the direction of their CEO Mike Sandler for several years. Our initial interactions required a modification of their video streaming products to a health care environment to allow complex ultrasound examinations to be seamlessly transmitted to our tertiary care facility from a number of locations. Mr. Sandler's team at Epiphan rapidly and cost effectively developed simple, point of care solutions which we have used in a wide variety of environments the US Olympic Committee, professional football, baseball, and hockey teams. We have also used the Epiphan products in remote locations such as the North Pole and during the Canadian Mount Everest Medical Operations Expedition to allow us to provide medical care in these austere environments. We recently incorporated the Epiphan product into our global outreach program in underserved regions across the Earth. This program is currently active in over 40 countries; I believe that Epiphan has strong potential for development and is able to reach new heights in telecommunication research.

Respectfully,

A handwritten signature in black ink that reads "Scott A. Dulchavsky".

Scott Dulchavsky, M.D., Ph.D.

ENVISION *the next 100 years.*
